Лабораторная работа 2. Ряд Фибоначчи с помощью итераторов Задание 1

```
gen_fib.py
       import functools
             return gen
          fib_gen = fib_elem_gen()
                 result = list(itertools.islice(fib_gen, number_of_fib_elem))
                  fib_gen = fib_elem_gen()
          g = fib_elem_gen()
           for i in range(10):
```

```
Первые 10 элементов ряда Фибоначчи:
0 1 1 2 3 5 8 13 21 34
gen.send(3): [0, 1, 1]
Process finished with exit code 0
```

test_fib.py

```
import pytest
fom gen_fib import my_genn
   gen = my_genn()
```

Задание 2

gen fib.py

```
import functools
import itertools
import math

def fib_elem_gen(): 3 usages

"""Γεμερατορ, возвращающий элементы ряда Φυδοκαννυ"""

a = 0
b = 1
while True:
   yield a
   res = a + b
   a = b
   b = res

def fib_coroutine(g): 1 usage
   @functools.wraps(g)
   def inner(*args, **kwargs):
        gen = g(*args, **kwargs)
        gen.send(None)
        return gen
return inner
```

```
### Open Comparises of the property of the pr
```

```
current_element = self.lst[self.idx]

self.idx += 1

height="1">
self.idx += 1

height="self.idx" | self.idx" | self.idx" |
self.idx += 1

height="self.idx" | self.idx" |
self.idx += 1

height="self.idx" |
self.idx += 1
```

```
Первые 10 элементов ряда Фибоначчи:
0 1 1 2 3 5 8 13 21 34

gen.send(3): [0, 1, 1]

Тестирование FibonacchiLst:
Для списка [0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 1]
Числа Фибоначчи: []
Ожидаемый результат: [0, 1, 2, 3, 5, 8, 1]

Process finished with exit code 0
```

test_fib.py

```
import pytest
      from gen_fib import my_genn, FibonacchiLst
 5  def test_fibonacci_lst_basic():
          result = list(FibonacchiLst(test_list))
          expected = [0, 1, 2, 3, 5, 8, 1]
          assert result == expected
          result = list(FibonacchiLst([]))
          assert result == []
17 ▷ def test_fibonacci_lst_single():
          result = list(FibonacchiLst([8]))
